- Tube Bending (1/16 through 2 inch)
- Clean Room (Class1000/Class100 work area; Helium Leak Testing capabilities)
- Industrial pressure gauge liquid filling
- Modular Platform Component assembly
- Engineered to order products
- Orbital tube welding

Tube Bending Training

This training is designed for your associates working with tubing who want to gather a better understanding of the basic principles involved in bending. This seminar will give your associates hands-on practice so they can become more proficient in their techniques.

Fitting Installation & Safety Seminar

The consequences of a fitting leak can be significant. The Swagelok Fitting Installation & Safety Seminar is designed to increase plant and employee safety and decrease operation costs.

Valve Functionality & Selection Training

This training is designed to build awareness and assist in the comprehension of valve functions. It will reduce the potential for incorrect valve selection by learning the proper selection process to better meet your applications needs.

Swagelok University

Supplement your current associate training program with Swagelok University. Swagelok U is an online offering of more than 100 self-paced courses, available at your convenience. It records employee training activity and progress.

- General Technical Topics
- Scientific Fundamentals
- Safety
- Plant Science
- Industry-Specific Topics

Orbital Weld Training

With hands-on instruction, attendees will learn orbital welding principles, how to setup, operate, and troubleshoot a Swagelok Orbital Weld System.
