

Training Day(s)

Now **YOU** have the option of choosing *the overall length of YOUR* Swagelok Advanced Tube Bending Safety class!

OUR NEW OFFERINGS –

ALL incorporating the same trusted and proven content to substantially improve your tube-bending skills and knowledge:

2.5-Day Course

Learn at a comfortable pace, with plenty of time for hands-on exercises and personal tutoring.

3-Day Course

Everything described in the 2.5-Day course, but with our renowned **Tube Fitting Installation Safety** primer.

3.5-Day Course

Your best overall value... Everything from our 3-Day course, but with added practice time to make challenging bends within a large electrical box to simulate real on-the-job conditions.

You Will Learn...

BENDING METHODS

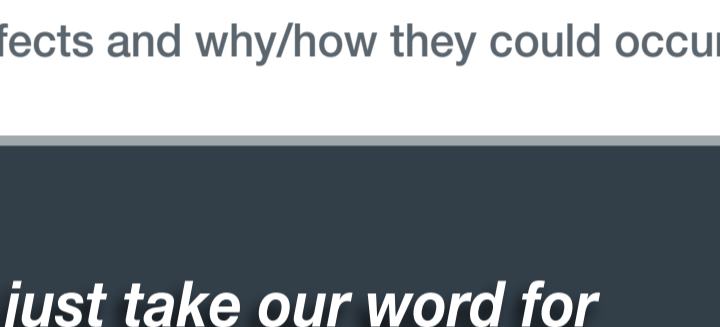

The Measure-Mark-Bend

The traditional basic way you've employed or heard about.

The Swagelok Master Technique

For superior accuracy and aesthetics. You'll learn how to precisely mark all the locations of all bends in a tubing run – to determine the overall length of tubing required – prior to actually making any bends. **Best of all:** This process works for all bend angles.

You Will ALSO Learn...

- ...the three critical variables to consider when bending tubing
- ...springback, how it affects bends, and how to compensate for it
- ...the minimum length of the last leg and its importance to bending
- ...how to precisely calculate the length of tube for an offset bend
- ...the five major potential bend defects and why/how they could occur

Don't just take our word for the major return you'll realize on your safety and productivity investment with us.

Here's what some recent students had to say:

- “Understanding how to make a parallel bend is a game-changer for my career”
- “This course gave me the knowledge – and confidence – to make even the toughest bends”
- “Highly recommended for all my maintenance and design colleagues”
- “A great foundation to get me to the next level of bending proficiency”
- “Eliminates guesswork or trial-by-error; I learned how to build a system”
- “Anyone working with pressurized systems needs to take this course”

Don't delay – classes are filling fast for late 2024 and early 2025!
