Your Local Swagelok® Fluid-System Solutions Experts

Finest in the Field

No matter what your fluid-system application or operational challenge, Swagelok leak-tight, premier Products and supplemental Strategic Support Services deliver optimum safety, performance, and profitability.

Your Challenge

A major Petrochemical customer was employing sample cylinders to collect gas samples from its plant for truck transport to a lab for testing and analysis. One style of Swagelok Quick-Connects was used for such process – but the valve stem tips were routinely getting bent or damaged.

Your Solution

Swagelok product-line experts were brought onsite to audit the current collection methodology, working collaboratively with the site's maintenance personnel. Quickly, the true problem was exposed: The stem tips were getting unintentionally jammed, with no alignment, into the Quick-Connect bodies. In addition, the integrity of some samples was jeopardized – due to falls or bounces – while being hauled. **Remedy:** a switch to a more durable Swagelok QTM2 offering with a recessed stem that would eliminate any potential for accidental harm.

Your Healthier Bottom Line

The component swap not only solved the issue, but enabled our key account to gain a larger flow capacity that resulted in vastly improved sample collection effectiveness and efficiency.
