

Hose Advisory Services (HAS)

Our program is designed to help take the pressure off of you by preventing unplanned downtime, repeated hose replacements, loss of profits, runtime failure and safety incidents.

Configurable. Local. Reliable.

Our Hose Advisory Services

What to expect

- Our hose advisory team partners with you to focus on your system optimization with our on-site survey process. This includes:
 - A thorough discussion of your facility's goals, where we learn the ins and outs of your facility
 - An on-site visual analysis of all hose systems, including their installation, placement, and interaction within the facility
 - Tagging of hoses on site
 - A report that details overall findings, prioritized improvement recommendations and suggestions with replacement options
 - Preventative maintenance schedule and hose inspection recommendations for your facility
 - Database developed with a catalogued inventory of hoses on site

Hose Maintenance

- Better predict when systems need attention
- Understand what steps are necessary to keep everything running smoothly
- Customized preventative maintenance schedules available

Increase Safety

- Keep your plant and processes safe
- Predictable and dependable leak-tight products
- Best practices to help reduce risk of injury and environmental damage

Save Money

- No longer having to replace the same problem hoses
- Reduce your unplanned downtime
- Reduce wasted product from leaking hoses
- Hose selection and installation done right the first time
- Optimally routed hoses and end connection combinations have a longer lifespan

Build & Supply Locally

- We build and supply hoses based on your company's personal maintenance schedule.
