

SWAGELOK[®] HOSE

PROVIDED BY SWAGELOK COLUMBUS|CHARLESTON

FINDING THE RIGHT HOSE FOR A WIDE RANGE OF PRESSURES AND TEMPERATURES

SWAGELOK HOSE AND FLEXIBLE TUBING

Swagelok hose and flexible tubing is available in custom lengths, in diameters 2 inches and under, and with a wide variety of end connections. Choose materials and end connections for a wide range of pressures and temperatures. Learn how Swagelok can help you find the right hose with the right end connection.

- Multiple-layered flexible conduit hose
- Single-layered flexible conduit tubing
- Static and dynamic applications
- Vacuum service to working pressures up to 6000 psig (413 bar)
- Temperature ranges -325 to 1000°F (-200 to 537°C)
- ECE R110-approved hoses available

THERMOPLASTIC HOSE

High-performance, multipurpose hose connects quickly and safely for hydraulic, natural gas, and other general industrial applications. Smooth inner wall provides flow control and enhanced drainability for precision and cleanliness. Available with a variety of end connections; 1/4 to 1/2 in. hose available with ECE R110 alternative fuel certification.

METAL BRAIDED HOSE

Convolute 316L Stainless Steel Braided Hose is constructed of stainless steel for minimal permeation or absorption. The convolute core allows for flexibility, and limits kinking. Available with a wide variety of end connections. Suitable for high-temperature, vacuum, medium-pressure, corrosive or general-purpose environments.

PFA FLEXIBLE TUBING

Chemically resistant, translucent, PFA flexible tubing is designed for use with both Swagelok PFA tube fittings and metal Swagelok tube fittings in low-pressure applications. The tubing's translucence lets you see media. Smooth inner wall for flow control and drainability.

HOSE ADVISORY PROGRAM

Eliminate costly issues that cause unplanned downtime or low product yield. Our field engineers will identify ways to enhance your hose selection, installation, inspection and maintenance procedures to improve hose life and performance. They'll help you develop preventive maintenance schedules and identify components to keep in inventory, including standardized end connections and couplings that will help improve your productivity.
